Complete lines for technical and window profiles

Sustainable Solutions Worldwide.
Process engineering for efficient plastics extrusion of tomorrow –
From the raw material to the finished product

Based on our modular line concept, we are able to implement cost-optimized and customer-specific solutions. This goes beyond the product specification to the processing of the materials, the infrastructure specified in the general conditions up to the appearance of the plant and the control interface. Our company takes all of these conditions into account when designing your extrusion line. We combine our own products with components from long term partners in order to supply our customers the ideal solution from a single source.

battenfeld-cincinnati extrusion lines –
One-stop solutions

1. Customer expectation
2. Technical clarification
3. Manufacturing
4. Line commissioning
   • Plant specification
   • Specification sheet
   • Production of machines
   • Selection of suppliers
   • Supplier coordination
   • In-house testing
   • Pre-commissioning
   • FAT on request
   • Line handover
   • Process consulting
   • Staff training
   • After Sales Service

Conservation of resources while maintaining profitability –
Sustainability all along the line

Our solutions offer a resource-saving and economical production of your products and our worldwide service network ensures the constant process availability. We focus on highest product quality with high output rates, functionality, machine availability as well as energy saving.
Complete lines for profile extrusion – from the raw material to the finished product

battenfeld-cincinnati stands for state-of-the-art machine manufacturing and innovative technologies. We plan, design and install profile extrusion lines with perfectly matched components that feature high output, energy-efficient production and excellent end product quality.

Extruder Series
In window profile extrusion, mainly PVC is used, which is processed on twin screw extruders. PVC profiles are characterized by low weight, excellent strength and form stability. For technical profiles, materials such as PO and PS, thermoplastic elastomers, polyamides and granulates with fillers are processed on single screw extruders in addition to PVC pellets.

Co-Extruder
Material costs can be significantly reduced by using recycled materials in co-extrusion. A combination of high-grade PVC production waste or recycled materials (old windows) with virgin PVC is possible. Depending on the requirements, the co-extruder can be mounted directly above the main machine (piggyback) or positioned on the floor at an angle.

The given output numbers depend on formulation, sheet thickness, density and processing condition.
Window and door profiles
Windows and doors made from PVC offer an excellent price/performance ratio, are easy to install, resistant to weathering and chemicals and have excellent heat and sound insulation properties. The market segment includes the following applications:

• Window and door profiles
• Blinds and roller blind boxes
• Extruded window sills

Technical profiles
Thanks to their manifold attributes, small profiles can be found in a great variety of applications:

• Decorative profiles and edge bands for furniture
• Cable conduits and light strips
• Cover strips and baseboards for building and electrical industry
• Electronic components
• Scanner strips for retail stores
• Sealing profiles made of thermoplastic elastomers
• Protective profiles
• Balcony panels and gutters
We have an extensive service network at our disposal to support our customers professionally and promptly with technical know-how and spare parts. Our locally available service technicians are regularly trained on the current state of the art and informed about new developments.
